

# Equestrian Buildings

**RNH Construction** specialise in the fabrication of all types of steel framed buildings including clear span portal framed buildings. From design and manufacturing the steelwork through to the final construction, RNH Construction are able to handle the whole of your steel framed building needs.

Our steel framework manufacturing facility is based at Market Drayton near Telford in Shropshire. Our huge factory provides considerable capacity for the widest range of design and size of steel framed buildings.

- We work closely with Architects and Designers all over the UK
- Our agricultural buildings conform to BS5502, our industrial buildings conform to BS5950
- We have an in-house design team using the latest CAD software
- We are a family owned business from a farming background

**RNH Construction** - steel framed equestrian building solutions. We can advise you on the most cost effective method of achieving the building dimensions that you require in order to provide the most practical use of the space that you have available.

By utilising our experience of constructing equine buildings we are able to work with you through the design process, planning application process, undertake groundworks, manufacture the steel structure for you and advise on cladding options. We can also fabricate and install all of the internal fittings such as viewing galleries and kicker boards.

If you would like to create an arena for training to international standards or a building to stable just a few horses, then RNH Construction can produce a steel framed building that blends in with the surroundings and yet offers a practical environment for your equestrian needs.
